Who we are

Aurora Network's born in 2001 as Web Agency, Internet Service Provider, System Integrator and Software House, merging different professionals' skills (systems analysts, programmers, web designers) in a unique entity in order to provide 360° customized consulting.

Aurora Network offers the latest in Information and Communication Technology solutions such as integrated data management systems, E-Business and system engineering.

Quality professionals, certified by global-leaders of hardware and software manufactures, guarantee an abundance of proposals and solutions in the IT services and production field.

Mission: what makes us unique

Our business mission is to supply analysis, support service and know-how to companies and organizations which intend to develop integrated IT systems for management and work procedures.

We pay attention to the specific requirements of our customers, to improve the best implementation both in technical terms and in profitability of investment.

Business Values

The key is Availability and Flexibility, therefore in understanding the needs and problems of the customer to find the adequate solution, even with untraditional solutions found 'outside the box'.

Our four values – Passion, Experience, People and Innovative Technologies - guide our work.

1. Local Area Networks (LAN)

Network design, implementation and maintenance, are executed by professional technicians and system administrators qualified and certified by Microsoft MCP+I (Internet) and MCSE both in Workgroups as well as singular or multiple domain environments.

Our company also has the technical requisites to install and configure products from Microsoft BackOffice such as Internet Information Server, ISA Server, and Exchange Server.

In Linux and Novell Netware environments Aurora Network has developed an expertise in the main technology solutions (Red Hat and other derivatives, Debian and other derivatives) and on the leading applications, paying particular attention to the implementation of messaging solutions, groupware, internet access, security, and traffic monitoring and filtering.

This gained expertise and experience also allow us to implement other network equipment and shared peripherals such as print servers, fax servers, storage servers, scan servers (for electronic filing), etc. We have had optimal results in virtualization, thanks to the installation of VMware Server Citrix XenServer and Microsoft Hyper-V Server both with local and shared Storage (Storage Area Network).

2. WAN

Our technical team is highly skilled at design, implementation, and maintenance of WAN, VPN Lan to Lan and User to Lan connections, using Cisco, 3Com, Watchguard and Zyxel equipment.

3. Intranet

Our knowledge of networks and protocols allow us to implement within a framework a corporate intranet. Tools such as a network fax, email, agenda, files and network printers allow the company to facilitate work sharing between a variety of documents and to optimize the available resources.

VPN connections allow access to headquarters, satellite offices and remote access users.

4. Security

Our long term experience and knowledge allows us to supply a superior grade of consultancy and assistance in design, implementation and security management solutions (Proxy, Firewall, Intrusion Detection System, Antivirus, Data saving on local or remote peripherals) on local networks and distributed networks.

We can also consult on definition of corporate security policies, adequate training and correct use of the systems available for data saving under the provisions by law.

5. E-Business solutions

With e-business solutions it is possible to compose an ideal course for the development of an EDP (Electronic Data Processing) area for our customer.

Our knowledge of the latest technologies in this field allows us to:

a) Transform main business processes

Aurora Network proposes solutions to transform the business processes into e-business processes, with chosen technology, whether it be Intranet, Extranet or Web, can truly improve the way work is done within the company.

b) Design new applications

The transformation of main business processes into e-business processes requires the generation of new applications operating on servers which are able to interact with Software and data already existing. Our technology enables us to build upon and integrate ready-made applications.

c) Design scalable, accessible, and secure environments

Build upon what has already been done, expanding existing technologies and create an accessible and secure environment.

d) Take advantage of knowledge and information

With e-business solutions the customer can easily access data and information wherever it may be, so as to strategically analyze it.

6. E-Commerce

Aurora Network offers end-to-end solutions which are totally integrated and scalable, simplifying the complexity of development and expansion of internet presence with the security of having at your disposal all the necessary management tools to manage an ample range of needs, from easy to use online forms and screen visualization to secure environments for multi-value, global shopping.

We offer consultancy and evaluation of the most adequate Internet Server Provider for your website needs and the correct procedures and legalities of opening a web domain.

7. Internet Service Provider

As an ISP for the Italian Registration Authority of the Telematic Applications Institute of CNR, Aurora Network provides domain registration services, server management, server hosting for any type of web application.

We have a vast experience in understanding the regulations of Naming which is of utmost importance as technical-legal support during the domain name registration process.

8. Software development

Aurora Network is specialized in the vertical development of software on diverse platforms and relational databases able to supply flexible data manipulation.

The individuality of the software consists of its strong orientation to the Web and, therefore, open to every platform.

Some examples of the applications developed are:

- Integrated management Flying clubs and flight schools (IcarusWeb);
- Document management (WebDoc);
- Newsletter and Mailing List management (WebLetter);
- Plants and industrial equipment management and maintenance;
- Commissions, orders, stamps and warehouse management;
- Call-out and intervention management;
- Total work hour management
- Total orders made by agents or salesmen;
- Data transfer from AS400 to Excel or internet applications;
- Clinical file management in specialist medical fields.

9. Training

As additional support, we offer instruction and specialized training courses for company staff in respective expertise areas (EDP, Network administrator, Webmaster, Office Automation, etc.). Teachers have over ten years of experience in the IT training field for pc software and in particular web software, networks and Microsoft Office products.

Training courses are targeted for:

- Beginner users;
- Expert users who wish to better understand their knowledge of a particular software product;
- Programmers;
- Teachers who wish to update on Microsoft Office.

Our clients are:

- Commercial and manufacturing businesses;
- Professional Offices;
- Public Administration;
- Software houses needing training for their clients;
- Public and private schools.

For courses and training, Aurora Network arranges an equipped classroom and a compatible group of teachers and IT professionals with tried and tested years of experience, collaboration and practice in writing and using a variety of software packages.

Partnership

An key strategy of Aurora Network is the search and collaboration with companies capable of integrating our solutions with high profile technology and services.

For this reason we have installed partnerships with the following corporations:
